

Question 1

The CEO wants to view the time series of revenue data for the year 2011 only. Generate monthly revenue and identify seasonal trends.

Answer

The monthly revenue analysis for 2011 reveals a clear seasonal sales pattern.

Key Insights:

- Revenue gradually increased from January through October.
- The highest revenue was generated in **November**, indicating peak customer demand before the holiday season.
- Revenue declined sharply in **December**, likely because the dataset contains only part of December rather than the complete month.
- January and February recorded comparatively lower sales than the later months.

Business Recommendation

- Increase inventory and staffing before the November sales period.
- Launch marketing campaigns in September and October to maximize holiday sales.
- Improve demand forecasting to optimize stock availability during peak months.

Question 2

The CMO wants to identify the top 10 countries (excluding the United Kingdom) generating the highest revenue and quantity sold.

Answer

The analysis shows that several European countries contributed significantly to revenue outside the United Kingdom.

Key Insights:

- **Netherlands** generated the highest revenue outside the UK.

- **Ireland (EIRE)** and **Germany** were also among the strongest performing markets.
- Countries with higher quantities sold generally generated higher revenue, indicating strong product demand.
- These countries represent attractive opportunities for business expansion.

Business Recommendation

- Increase marketing investments in high-performing countries.
 - Expand product availability in these markets.
 - Develop country-specific promotional campaigns to strengthen customer engagement.
-

Question 3

The CEO wants to identify the top 10 customers who have contributed the highest revenue.

Answer

Customer-level analysis indicates that a relatively small group of customers generated a substantial share of total revenue.

Key Insights:

- The top 10 customers contributed significantly more revenue than the average customer.
- High-value customers are responsible for a large proportion of overall sales.
- Repeat purchasing behavior highlights strong customer loyalty.

Business Recommendation

- Introduce loyalty and rewards programs for high-value customers.
- Provide personalized offers and exclusive discounts.

- Focus retention strategies on premium customers to maximize lifetime value.
-

Question 4

The CEO wants to identify countries with high demand (excluding the United Kingdom) based on quantity sold.

Answer

The demand analysis highlights countries with strong purchasing activity regardless of revenue.

Key Insights:

- Netherlands, Germany, France, and Ireland exhibited high product demand.
- Higher sales volume indicates strong customer interest and market potential.
- Some countries recorded high quantities but comparatively lower revenue, suggesting opportunities for pricing optimization or premium product offerings.

Business Recommendation

- Prioritize inventory allocation for high-demand countries.
 - Expand logistics and supply chain capabilities in these regions.
 - Analyze customer preferences to tailor product assortments for each market.
-

Overall Business Conclusion

The Tableau dashboard provides valuable insights into the company's retail performance by highlighting seasonal sales trends, identifying high-performing international markets, recognizing the most valuable customers, and revealing countries with strong product demand. These insights can support data-driven decisions related to inventory planning, targeted marketing, customer retention, and international business expansion, ultimately helping the organization improve revenue growth and operational efficiency.
